

Table of Contents

1. Introduction	1
1.1 Basic Concepts,	1
1.2 Single-Degree-of-Freedom Systems,	3
1.3 Free and Forced Vibrations,	7
1.4 Free Vibration,	7
1.5 Forced Vibration,	17
1.6 Total Motion,	28
2. Coordinate Systems and Rotor Motion	37
2.1 Coordinate Systems,	37
2.2 Steady State Rotor Motion,	39
2.3 Elliptical Motion,	41
2.4 Orbit Simulator,	47
3. The Laval-Jeffcott Rotor Model	55
3.1 The Two-Degrees-of-Freedom Rotor System,	55
3.2 Translational Motion,	58
3.3 Natural Frequencies and Natural Modes,	59
3.4 Steady State Response to Unbalance,	61
3.5 Steady State Response to Shaft Bow,	75
3.6 Internal and External Viscous Dampings,	83
3.7 Rotational Motion and Gyroscopic Effects,	90
3.8 Energy Consideration,	97
3.9 Transient Startup and Shutdown,	101
3.10 The Effects of Flexible Support,	107
4. Rotating Disk Equations and Rigid Rotor Dynamics	119
4.1 Rigid Disk Equation,	119
4.2 Rigid Rotor Dynamics,	122
4.3 Rigid Disk on Flexible Rotor,	132
4.4 Flexible Disk Equation,	148
4.5 Offset Disk Equation,	149

5. Shaft Finite Element Equations	155
5.1 General Considerations,	155
5.2 Cylindrical Element,	157
5.3 Conical Element,	166
5.4 User's Supplied Element,	167
5.5 Sub-Element Condensation,	168
5.6 Couplings,	170
5.7 Examples,	172
6. Bearings and Other Interconnection Components	191
6.1 General Consideration,	191
6.2 Bearing Coordinate Systems,	193
6.3 Fundamentals of Hydrodynamic Journal Bearings,	196
6.4 Fixed Profile Journal Bearings,	201
6.5 Reynolds Equation,	208
6.6 Bearing Static and Dynamic Characteristics,	210
6.7 Solutions for Reynolds Equation,	216
6.8 Linear and Nonlinear Analyses of a Journal Bearing,	230
6.9 Tilting Pad Journal Bearings,	245
6.10 The Infinitely Short Cylindrical Journal Bearing,	263
6.11 Squeeze Film Dampers,	268
6.12 Floating Ring Bearings,	275
6.13 Gas Lubricated Bearings,	280
6.14 Rolling Element Bearings,	285
6.15 Magnetic Bearings,	292
6.16 Liquid Annular Seals,	297
6.17 Aerodynamics Cross Coupling Force,	305
7. System Governing Equations and Analyses	307
7.1 Governing Equations of Motion,	307
7.2 Static Deflection and Bearing Loads,	308
7.3 Critical Speeds and Modes,	309
7.4 Whirl Speeds and Stability Analysis,	315
7.5 Steady State Synchronous Response,	321
7.6 Transient Response,	325
7.7 Examples,	333

8. Torsional Vibration	367
8.1 General Introduction,	367
8.2 Element Equation,	369
8.3 Two-Inertia System,	372
8.4 Geared System,	373
8.5 Couplings,	378
8.6 System Equations of Motion,	379
8.7 Natural Frequencies and Modes,	381
8.8 Steady State Forced Response,	384
8.9 Transient Motion,	385
8.10 Examples,	388
9. Balancing	399
9.1 General Introduction,	399
9.2 Influence Coefficient Method,	400
9.3 Examples,	403
Appendices	413
A. Mass Properties,	413
B. Elemental Matrices,	417
C. Lubricant Properties,	422
D. Systems of Units,	431
References	437
Index	443
